Web Programming Experiment File (SEC035)

**Bachelor of Technology
in
Computer Science and Engineering**

Submitted by

Aditya (2401010023)

B.Tech CSE(Core)–4thSemester

Section: A

Submitted To:

MS. Rishika Mehta

**School of Engineering & Technology
K.R. MANGALAM UNIVERSITY
Sohna, Haryana, 122103, India feb-
2026**

Experiment:4

Task

Task1: Project Setup & Introduction

- Create a project folder named `dynamic_todo_list`
- Inside the folder, create: ○ `index.html` ○ `style.css` ○ `script.js`
- Add header comments in HTML(project title, name, date)

- Display a short description of the to-do list application

Deliverable:

Project folder with HTML, CSS, and JS files linked correctly.

Task2: To-Do List Interface(HTML)

- Create an input field for entering tasks
- Add an “AddTask” button
- Display tasks in a list format(or)

Deliverable:

Basic to-do list layout created using HTML.

Task3: Styling the To-Do List(CSS)

- Apply CSS for:
 - Input box and buttons
 - Task list alignment
 - Visual separation of tasks
- Ensure the interface is clean and readable

Deliverable: style.css file with neat and consistent styling.

Task4: Add & Display Tasks (JavaScript)

- Capture user input using JavaScript
- Add new tasks dynamically to the list
- Prevent empty tasks from being added

Deliverable:

Functionality to add and display tasks dynamically.

Task5: Edit & Delete Tasks

- Add “Edit” and “Delete” buttons for each task
- Allow users to modify task text

- Remove tasks from the list dynamically

Deliverable:

Fully functional edit and delete features.

Task6(Bonus): Task Completion Status

- Add a checkbox or toggle for task completion
- Visually indicate completed tasks (e.g., strikethrough)
- Optional: Count completed vs pending tasks

Deliverable:

Enhanced to-do list with task completion tracking.

HTML

Index.html

```
<!DOCTYPE html>

```

JAVASCRIPT

script.js

```
const input = document.querySelector("input"); const addButton =  
document.querySelector(".input-section button"); const taskList =  
document.querySelector("ul"); const taskCount =  
document.querySelector(".task-count");
```

```
let count = 0;
```

```
function updateCount() {  
    taskCount.textContent = `Total Tasks: ${count}`;  
}
```

```
function createTask(taskText) {    const li  
= document.createElement("li");
```

```
    const span = document.createElement("span");  
span.className = "task-text";    span.textContent  
= taskText;
```

```
    const buttonDiv = document.createElement("div");  
buttonDiv.className = "task-buttons";
```

```
    const completeBtn = document.createElement("button");  
completeBtn.textContent = "✓";    completeBtn.onclick =  
function () {    span.classList.toggle("completed");  
    };
```

```
    const deleteBtn = document.createElement("button");  
deleteBtn.textContent = "✕";    deleteBtn.onclick =  
function () {    taskList.removeChild(li);    count-  
-;    updateCount();  
    };
```

```
    buttonDiv.appendChild(completeBtn);  
buttonDiv.appendChild(deleteBtn);    li.appendChild(span);  
li.appendChild(buttonDiv);
```

```
taskList.appendChild(li);
```

```
        count++;
        updateCount();
    }

    addButton.addEventListener("click", function () {
        const taskText = input.value.trim();    if (taskText
        !== "") {        createTask(taskText);
        input.value = "";
        }
    });

    input.addEventListener("keypress", function (e) {
        if (e.key === "Enter") {        addButton.click();
        }
    });

    updateCount();
```

Output:

Dynamic To-Do List

Organize your daily tasks efficiently with this interactive to-do list application.

AddTask

Total Tasks: 0

Dynamic To-Do List

Organize your daily tasks efficiently with this interactive to-do list application.
